

# Strategy

Паттерн Стратегия

# Strategy pattern (AKA Policy pattern)

- **Основная цель:** отделить логику принятия решений (decision making logic) от алгоритма (algorithm)
- **Результат:** выбор/запуск одного из нескольких алгоритмов

# Strategy pattern – способы реализации

- Run-time
  - Интерфейсы
    - Лямбды (Java 8+)
      - Ссылки на методы
  - Наследование классов
  - Рефлексия
  - Ссылки на методы (не Java)
- Compile-time
  - Generics & templates - Policy-based design
    - [https://en.wikipedia.org/wiki/Policy-based\\_design](https://en.wikipedia.org/wiki/Policy-based_design)

# Выбор стратегии

- Реализацию стратегии выбирает само клиентское приложение

```
SortStrategy sorter = new BubbleSorter();
```

- Реализацию стратегии предоставляет система/фреймворк/контейнер/...  
через фабрики / IoC(DI, SL, конфиги,...),...

```
Calendar calendar = Calendar.getInstance();
```

# Зачем вообще нужна Стратегия?

- Вопрос:  
Зачем вообще нужна какая-то стратегия?  
Ведь если нужно что-то поменять можно  
сделать Ctrl-C + Ctrl-V или создать  
наследника и переопределить поведение?

- Ответ:  
**SOLID !**

# Strategy + SOLID = BFF

- **S** – SRP - Single-responsibility principle
  - A class should have only a single responsibility (нипаняятна)
  - A class should have one and only one reason to change, meaning that a class should have only one job
- **O** – OCP - Open-closed Principle
  - Objects or entities should be open for extension, but closed for modification
- **L** – LSP - Liskov substitution principle
  - Objects in a program should be replaceable with instances of their subtypes without altering the correctness of that program
- **I** – ISP - Interface segregation principle
  - Many client-specific interfaces are better than one general-purpose interface
  - Classes that implement interfaces, should not be forced to implement methods they do not use
- **D** – DIP - Dependency inversion principle
  - High level modules should not depend on low level modules rather both should depend on abstraction. Abstraction should not depend on details; rather detail should depend on abstraction

# Strategy ♥ DRY, Strategy ♥ EDP

- DRY – Don't Repeat Yourself!
  - DRY is good 😊
  - WET is bad 😞
    - write everything twice
    - we enjoy typing
    - waste everyone's time
- EDP – Explicit Dependencies Principle
  - Methods and classes should explicitly require any collaborating objects they need in order to function correctly  
(through *method parameters* or *constructor parameters*)
    - Explicit Dependencies is good 😊
    - Implicit Dependencies is bad 😞

# Coupling / Cohesion

Remember:

low in coupling and high in cohesion
